```

1. Basic Steps

- Step 1: Install terminator and zsh
- Step 2: Install [oh-my-zsh](#)
- Step 3: Customize your plugin
- Step 4: Choose and enable a theme you prefer from [here](#), mine is Jonathan
 - `vim .zshrc`
 - change `ZSH_THEME=theme_name`
 - save and restart terminator

2. Other Tips

- If you encounter "zsh: corrupt history file", run this to fix it

```
1. curl
   https://gist.githubusercontent.com/kolach/fa104674bf2803fb4d54/raw/e2db3a
   dc1a8be7d08bd45e335d5518b714e01b10/fix_zsh_history.sh | zsh
```

- If you can not use ipython, add the path in ".zshrc"

```
1. export PATH=$PATH:/home/venturer/anaconda2/envs/python3/bin
```

- You can download plugins and then set the plugin line(in ".zshrc") as

```
plugin = ( name1 name2 ... ). Following are my plugins:
```

- git (the default one)
- zsh-syntax-highlighting
